Artesian Water Company

MAKING EVERY DROP COUNT

»» Artesian works hard to make every drop of water count. Since 1905 Artesian's primary objective has been to protect our precious groundwater resource and implement business practices that instill the highest standards of environmental stewardship. We understand the importance of protecting the environment and strive to be a leading environmentally-conscious, ethical and responsible corporate citizen. We are continually working with partners in business and government to develop new and innovative solutions to water and wastewater treatment and service challenges, always focusing on Total Water Resource Management. We remain steadfast in our commitment to improve the environment.

Artesian is committed to providing high quality drinking water and exceptional service to our customers at a fair price. We continue to meet new and evolving water quality standards by utilizing advanced treatment technologies to remove natural and man-made impurities from our water supply. We approach our wastewater treatment processes with the same focus on protecting our environment and communities. We believe that land application techniques which keep treated wastewater as part of the local water cycle, using it to recharge groundwater aquifers and even provide nutrients for crops, are the most environmentally sound options for disposal.

Our on-going utility investments stimulate the economy and create jobs and help to provide the needed infrastructure to support economic growth. Artesian is a proud member of the Delaware State Chamber of Commerce and we support their mission to promote economic vitality in the State of Delaware.
